

MANUFACTURING

Component & Contract MANUFACTURING

For the past 25 years, we've been a manufacturing partner to hundreds of local businesses across Australia and New Zealand.

Like many of our customers, we too are a local manufacturer. We have wide-ranging experience across the various industrial applications our customers' operate in. But we also understand the business challenges that local SME manufacturers face on a daily basis.

That's why our goal isn't just to provide the best products, advice and service for our local customers, but to ensure we do this seamlessly, efficiently and economically with best in class response to ensure our customers can get on with their job.

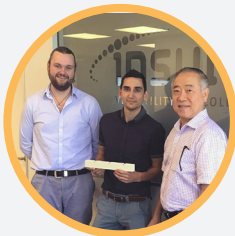

Custom built components

Engineered, machined components for small quantities or large production runs.

Just in time supply

We're local, flexible and we specialise in solving problems with fast turn-around times.

Local technical support

25 years of engineering materials experience and backed by the global leader Rochling Engineering Plastics.

ISO 9001/2015 quality assured

We live and breathe quality in all we do: in our manufacturing processes, materials selection, and the people we employ.

Custom-made components for Industrial Applications

We provide custom manufactured parts from a wide range of electrical, thermal and mechanical engineering materials – including plastics, fibre composites and cellulose-based materials.

We aim to fulfil any quantities, lead times and component complexity that you can throw at us. And we never compromise on quality.

Capabilities

Machinery and equipment

Our two manufacturing sites at Brisbane and Melbourne house an extensive array of machinery. Coupled with our highly-trained and experienced team, we are able to deliver on the most complex of customer requirements. Our manufacturing capabilities include the following:

- CNC machining with large-capacity work tables
- VMC machining
- Panel, beam and band saws
- Crepe paper tube rolling
- Hydraulic clack press
- Paper slitting
- Tape slitting and re-logging
- Guillotines
- Bending machines
- Water saw
- Plus drills, lathes, routers, sanders and more
